SIKA PAVES THE WAY FOR IMPROVEMENT

Sika® Pave Fix Plus is a ready to use self-setting paving grout that gives perfect pointing for paths, patios and paving. The new formula is shower resistant and faster curing, overcoming the limitations well known with similar products. Sika® Pave Fix Plus also provides a co-ordinated finish, as it is available in grey, beige and brick red.

The new and improved Sika® Pave Fix Plus is a low maintenance self setting jointing compound that sets hard and strong into the paving joint in 6-12 hours. Unlike sand, it does not blow or wash out of the joint, it won't shrink or crack and it resists weed growth.

Easy to use, simply spread the product onto the paving and sweep into the joints, ensuring each joint is completely filled and compacted. Joints to be pointed should have a minimum full depth width of 5mm and be at least 25mm deep.

Available in 11 litre tubs, Sika® Pave fix Plus is suitable for use on old or new paving slabs, cobbles, flagstones and stone sets.
