SIKA LAUNCHES NEW WOODCARE RANGE AT GLEE

GLEE, NEC – 20th-22nd September 2009

Stand: J2 Hall 4

At this years Glee event at the NEC, Sika will launch its new comprehensive range of wood treatments and preservers. Developed using new micro-emulsion technology, tradesmen can now benefit from a range that exceeds the performance of solvents in a VOC and solvent free system.

The new range of Sika wood treatments and preservers allows tradesmen to benefit from a healthier working environment. At the same time, the micro particles mean all products penetrate deep into the wood and provide a rapid drying time of just one hour.

The new Sikagard[®] range includes: Universal Wood Treatment; Woodworm Killer; Dry Rot Fluid; Clear Wood Preserver; Clear Decking Preserver. Each product is ready to use either in a standard 5 litre metal can or as a concentrate in a water-soluble sachet. Extremely easy to use, simply drop the sachet into water and allow it to dissolve for 2-3 minutes, mix well and apply to the area.

Other products within the range include tinted Wood Preservers in Red Cedar, Dark Oak and Pine, available in the 5L tin, as well as a Mould Cleaner, available in a water-soluble sachet.

Also featuring at Glee will be other innovations from the Sika landscaping range including: Sika[®] Brick and Patio Cleaner, Sika[®] Block Paving Fix, Sika[®] Mould Buster and Sika[®] Pave Fix Plus. Sika[®] Patio Seal will also be showcased at the event as part of the surface treatments range.

For further information about any of the products within the range call Sika's Technical Helpdesk Tel: 01707 363810.
